Open Access Day's Events

CEU Library is organizing events on 15, 16, and 17 October 2024 on publishing via open access. Publishing open access is becoming increasingly important as it allows for the free and widespread dissemination of research, making knowledge accessible to a global audience without financial barriers.

Find out more about open access at the three events. Guiding questions are: How can publications in open-access journals be realized here at the CEU? What experiences does a researcher have with open access? What is the connection between the Open Research Repository (ORR) and the CEU Research Portal?

All events take place in B 319 Senate Room (on-site event only).

Feel free to bring your Lunch – We provide water, coffee, and tea.

Oct. 15 (Tuesday)

Open Access Publishing possibilities at CEU (David Frank, Deputy Head CEU Library/ Ivett Molnar, Head of Electronic Resources and Services, CEU Library)

12:45 pm – 13:15 pm

The upcoming information event for the CEU community will provide a comprehensive overview of open-access publishing and open-access funding possibilities. Participants will gain insight into the requirements for publishing without additional costs and learn why it is (in many cases) essential to be a corresponding author when submitting an open-access article to the publisher.

Oct. 16 (Wednesday)

Open access from the perspective of a researcher (Tim Crane, Pro-Rector for Foresight and Analysis and Professor of Philosophy)

12 pm – 13 pm

Don't miss this unique opportunity to hear Tim Crane share first-hand experience with open-access publishing. Subsequently, participants will have the opportunity to engage in a broader exchange of insights and experiences. Librarians are on hand to offer their expertise and guidance.

Oct. 17 (Thursday)

How can Open Research Repository (ORR) and CEU Research Portal work together to enhance your research visibility?

12:45 pm – 13:15 pm (Karolina Zernicka, Scholarly Communication Officer CEU Library)

Recently, the library has implemented new systems that help increase the visibility of CEU researchers' research results. This session will give the audience a better understanding of which systems are in place and how open-access content can be made available.
